Remy - Window Setup Guide

0. Windows Environment

WSL

1. Requirements

   Make sure you have **WSL** on your local machine. If not yet, check https://learn.microsoft.com/en-us/windows/wsl/install

2. WSL Settings *(Optional for faster API calls to LLM from inside Docker)*

   Open `Run` (Win + R) and run

   ```
   notepad.exe %UserProfile%\.wslconfig
   ```

   Write and save

   ```
   [wsl2]
   networkingMode=mirrored
   dnsTunneling=true
   autoProxy=true
   ```

   Restart WSL to apply settings. In powershell, run

   ```
   wsl --shutdown
   wsl -l -v

   # make sure all stopped

   wsl
   ```

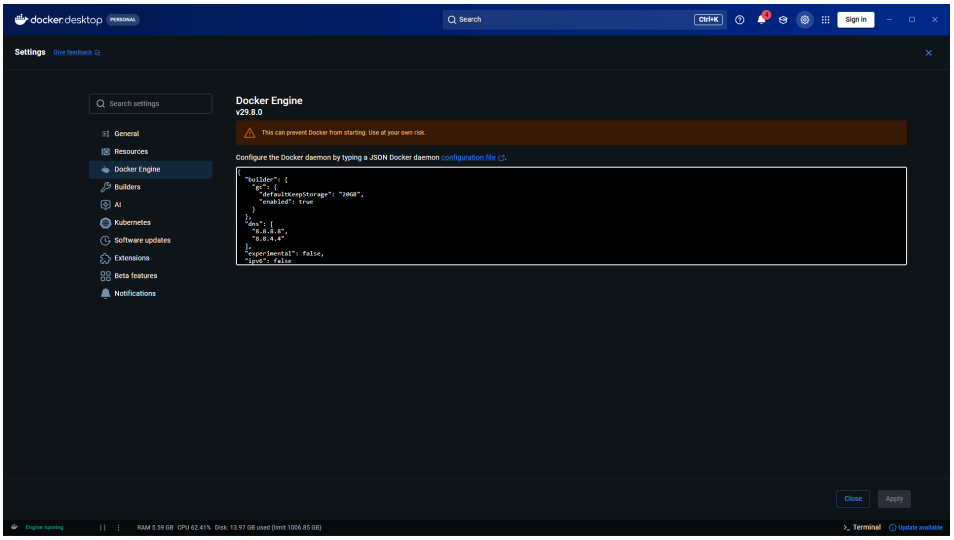

Docker Desktop

1. Requirements

   Make sure you have **Docker Desktop** on your machine. If not yet, check https://www.docker.com/products/docker-desktop/

2. Docker Desktop settings *(Optional for faster API calls to LLM from inside Docker)*

   Open `Docker Desktop > Settings > Docker Engine`

Paste

```
{
  "builder": {
    "gc": {
      "defaultKeepStorage": "20GB",
      "enabled": true
    }
  },
  "dns": [
    "8.8.8.8",
    "8.8.4.4"
  ],
  "experimental": false,
  "ipv6": false
}
```

Apply and restart Docker

Gemini API key

Go to https://aistudio.google.com/docs/api-key and generate an API key for conversational feature.

1. Project Directories

The source code is in `SystemCode` folder

Directory tree

2. Start App

Step 1: Setup env variables

Run

```
cp .env.example .env.nonprod
```

Then, in `SystemCode/.env.nonprod`, set

1. For Neo4j

```
NEO4J_DOCKER_URI=bolt://neo4j:7687
NEO4J_USERNAME=neo4j
NEO4J_PASSWORD=neo4j-foodkb
```

2. For eval

```
RANKER_MODE=rule
JEV_API_KEY=
JEV_MODEL=jev-latest

JUDGE_MODE=jev
REMY_DATA_VERSION=unspecified
REMY_EVALUATION_TOKEN=
REMY_EVALUATION_DB=target/evaluations.sqlite3
```

3. For LLM model

   Currently supporting ollama and google_genai models

```
REMY_LLM_PROVIDER=
REMY_LLM_MODEL=

# For google gemini
GEMINI_API_KEY=
```

4. For Langfuse

   Run script

```
uv run --package remy-api python scripts/init_langfuse.py --path .env.nonprod
```

   to populate

```
LANGFUSE_TRACING_ENABLED=true
LANGFUSE_PORT=
LANGFUSE_HOST=
LANGFUSE_PUBLIC_KEY=
LANGFUSE_SECRET_KEY=
LANGFUSE_POSTGRES_PASSWORD=
LANGFUSE_CLICKHOUSE_PASSWORD=
LANGFUSE_REDIS_PASSWORD=
LANGFUSE_MINIO_PASSWORD=
LANGFUSE_SALT=
LANGFUSE_ENCRYPTION_KEY=
LANGFUSE_NEXTAUTH_SECRET=
LANGFUSE_INIT_USER_EMAIL=
LANGFUSE_INIT_USER_PASSWORD=
REMY_POSTGRES_PASSWORD=bf4b9ba7d6eeec3345d88d6e1eb148166768a270544f166e50db7ca9a0cda2d8
REMY_JWT_SECRET=O5HBLHqC-sc6jHvc0WdpHGE8D8od39sRY-W9jvfrOAxKsClXCofExoUuywLFtHFK
POSTGRES_PASSWORD=bf4b9ba7d6eeec3345d88d6e1eb148166768a270544f166e50db7ca9a0cda2d8
REMY_CHECKPOINT_DB_URL="postgresql://remy:${REMY_POSTGRES_PASSWORD}@postgres:5432/remy_main"
```

Step 2: Run script

1. Download neo4j dump file from Drive

   https://drive.google.com/drive/folders/1Gvgsyn0SwnXeCXB457-B1KTeu11VjmrI?usp=drive_link

2. In WSL, run

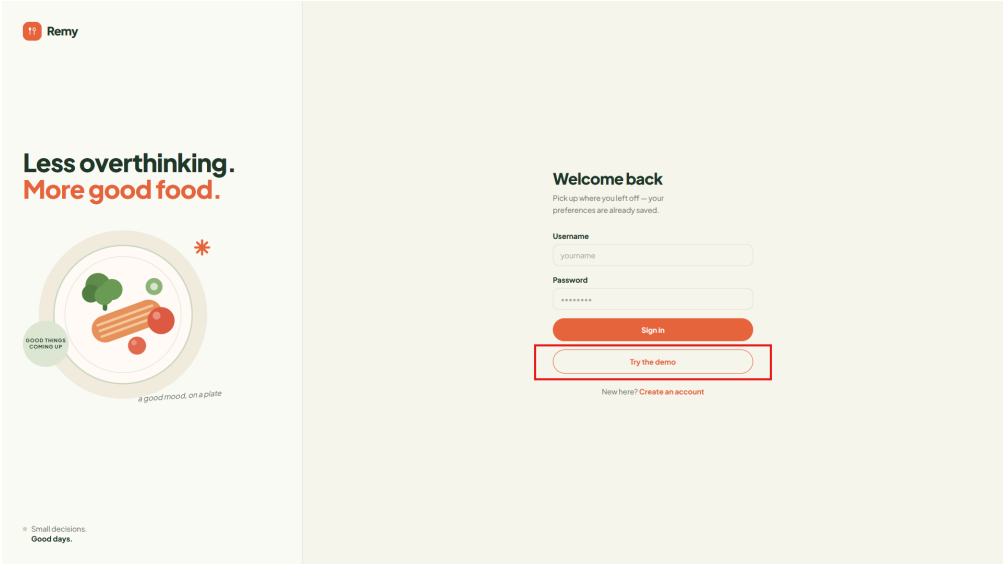

```
cd SystemCode
./remy/start-all.sh
```

   ⚠️ Make sure on the first run there is **database creation confirmation**

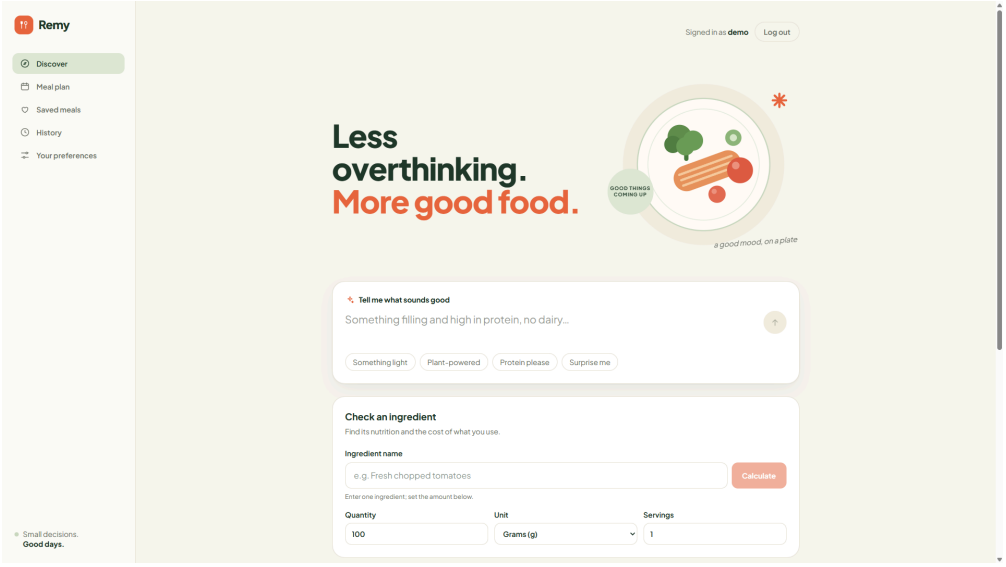

```
✓ Neo4j snapshot loaded successfully.
```

Step 3: Try the app

1. Go to http://127.0.0.1:3100/

2. Click “Try the demo” to start

3. Try a question

> Plan my meals for 3 days, with 3 meals per day, for 1 person. I have a severe peanut allergy and no other dietary restrictions. Aim for about 2000 kcal and 100g of protein per day, with calories never exceeding 2500 kcal. A 20% tolerance on the nutrient targets is fine.

3. Run evaluations

Step 1: Setup env variables

In `SystemCode/.env.nonprod` set

```
RANKER_MODE=rule
JEV_API_KEY=
JEV_MODEL=jev-latest

JUDGE_MODE=jev
REMY_DATA_VERSION=unspecified
REMY_EVALUATION_TOKEN=
REMY_EVALUATION_DB=target/evaluations.sqlite3
```

Step 2: Run `make`

1. Run

   By default, it will evaluate 5 most recent plans generated

   ```
   cd SystemCode
   make eval-jev
   ```

   If you want custom limit

   ```
   make eval-jev LIMIT=10
   ```

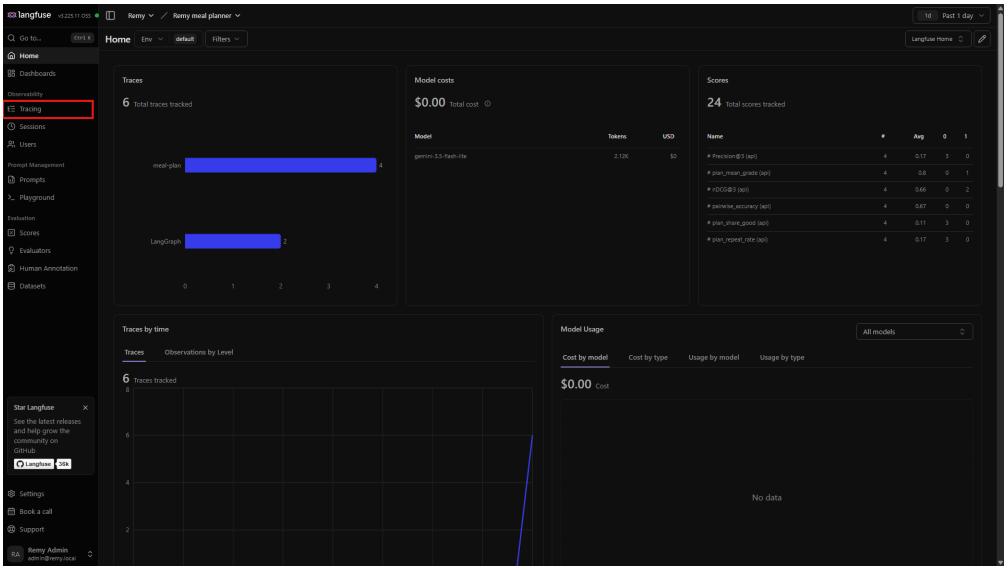

2. Output file will be at `SystemCode/target/eval/jev_report.json`

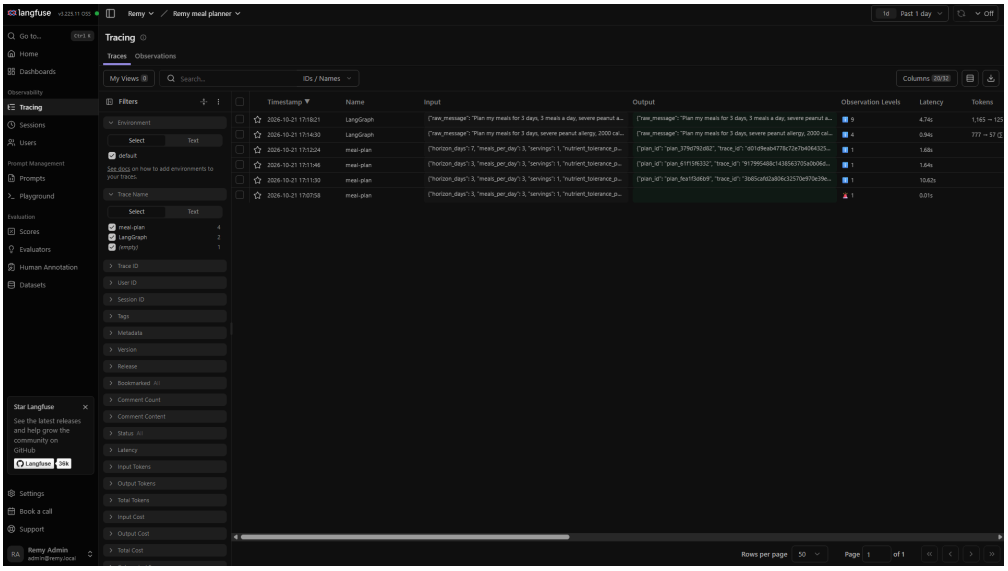

Step 3: See result on the UI

1. Go to http://127.0.0.1:3032/ (⚠️ Chang 3032 to your `LANGFUSE_PORT` value)
2. Go to project Remy

3. Go to tracing

4. See trace details
